- VS Code & Visual Studio
- GitHub & GitHub Desktop
- Microsoft Office
- Postman
- MongoDB Compass & Shell

Projects

Visit: (kiernendabbs.vercel.app) for more school and personal projects

“Issue Tracker” Web Application

- The “Issue Tracker” is a MERN stack application designed to be a malleable website application able to be repurposed for a variety of needs. This application includes a scalable MongoDB backend with Express middleware and a responsive, user-friendly ReactJS frontend, all tied together with several Node packages

SolarView Design & Installation LLC

- SolarView Design & Installation is a company that works on commercial and residential buildings to design and install blinds, shutters, and shades on various windows. The Ranken Technical College web design class was asked to redesign their website, and my design was one of three candidates for selection

Guild Alliance Player Leaderboard

- The Guild Alliance Player Leaderboard is a website designed to showcase a leaderboard for top guilds of the Hypixel Skyblock video game server. This platform provides users with real-time updates on guild rankings, member performance, and key metrics such as experience, collections, and achievements.
